

Versatile DX35Z-7 Mini Excavator on Display at The ARA Show

- The zero tail swing model from DEVELON is part of the most popular mini excavator size class.
- A standard quick-coupler-ready design enables DX35Z-7 operators to easily change attachments and maintain productivity.

(SUWANEE, Ga. – January 2025) Industry research shows that the 3.8-metric-ton (8,300 lb.) size class is one of the most popular for mini excavators, including among customers who purchase them for the rental industry. This week, DEVELON is pleased to display the [DX35Z-7](#) in its exhibit at The ARA Show.

“The DX35Z-7 mini excavator is a zero tail swing machine, providing peace of mind for operators when they are working in tight spaces,” says Andy Jeong, mini excavator product manager at DEVELON. “The machine’s operating weight, digging depth (10 feet 8 inches) and reach (17 feet 7 inches), combined with its design, make it a desirable mini excavator for rental stores and their customers working in construction, landscaping and utility applications.”

Operators can dig in offset positions while working flush against structures or obstacles. The mini excavator’s swing casting and cylinders remain within the track width at full left-swing, making it less likely that operators will damage the components when working in tight areas. This feature is especially helpful when rental stores are renting to less-experienced operators.

Standard Premium Features

Standard premium features for the DX35Z-7 include the following:

- 1-way/2-way auxiliary hydraulics (without pedal)
- [MY DEVELON fleet management](#) (telematics)
- Quick-coupler-ready design
- Selectable control pattern (BHL vs. ISO)
- Thumb-ready arm (bracket installed)
- Travel alarm

All-Day Productivity

The DX35Z-7 is loaded with features to help operators stay focused and productive on challenging job sites, highlighted by the standard enclosed cab with heating and air conditioning. Easy-to-use joystick controls mimic those in larger DEVELON crawler and wheel excavators. For enhanced visibility, a rear view camera is available as an option.

Operators can choose their preferred control pattern, either ISO or BHL. The change valve is located beneath the floor cover.

Available as an option, a long-arm configuration provides operators with greater reach, dump height and dig depth. This minimizes the required machine repositioning and improves operator productivity.

Additional details about the DEVELON DX35Z-7 mini excavator are available [online](#).
